

## COMPUTER BASED TRAINING

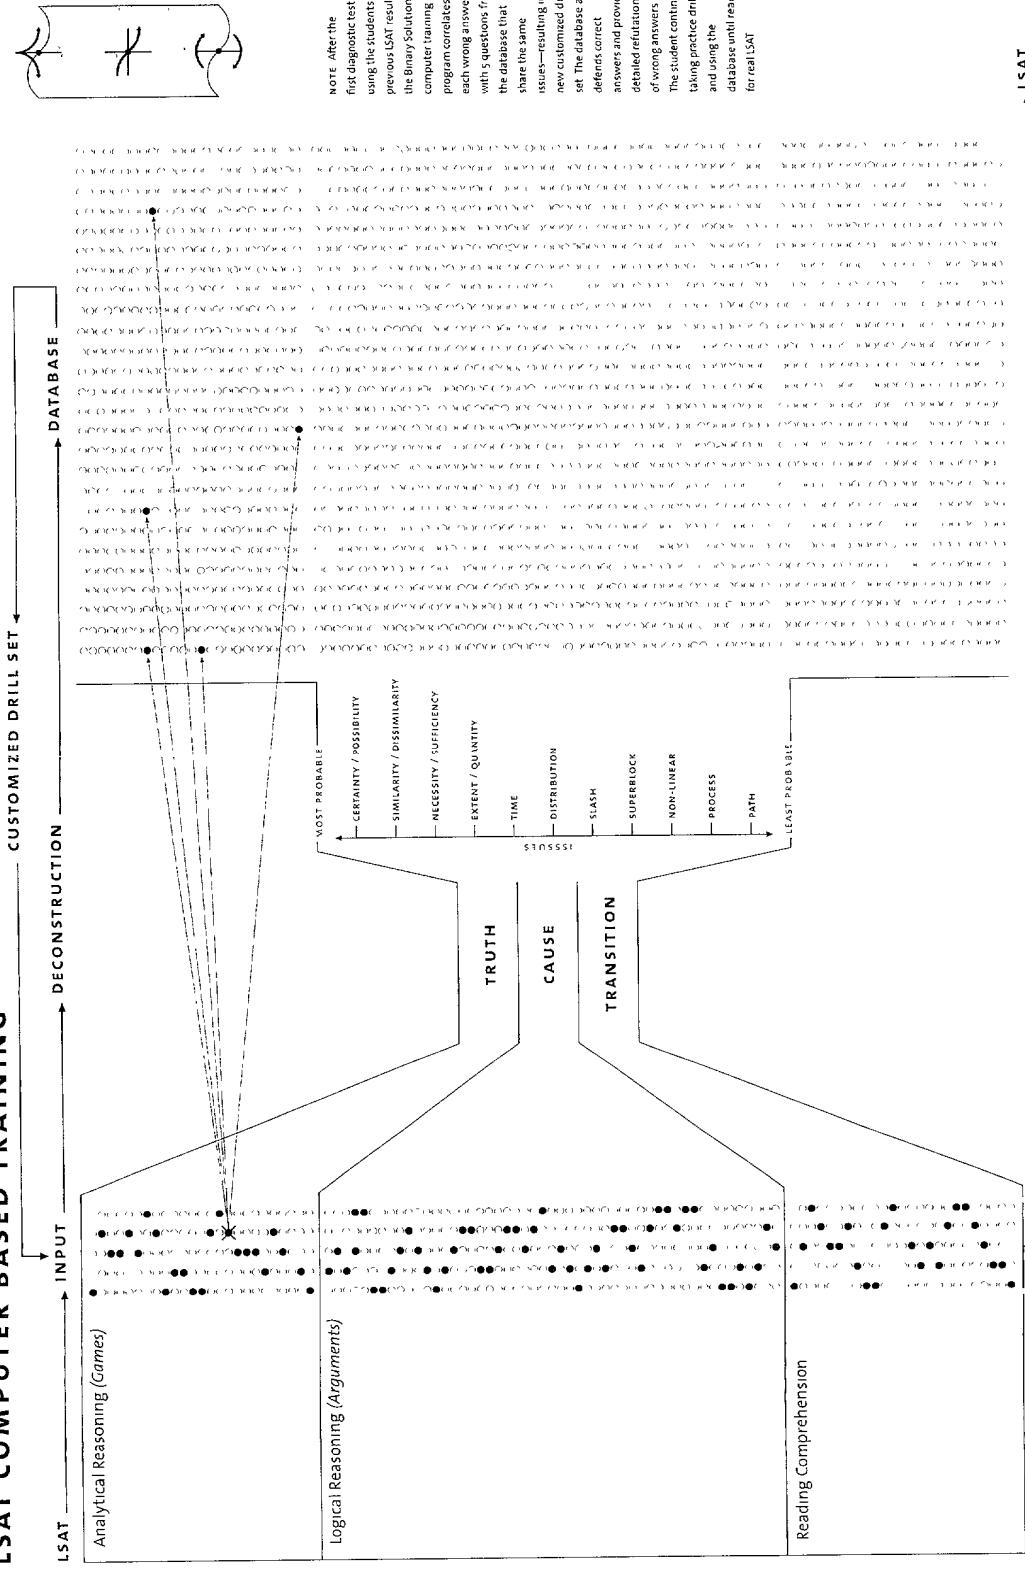

**RESULT:** A Mental Biofeedback™ that strengthens weak areas through customized practice

# LSAT COMPUTER BASED TRAINING

## LSAT COMPUTER BASED TRAINING

### THE BINARY SOLUTION

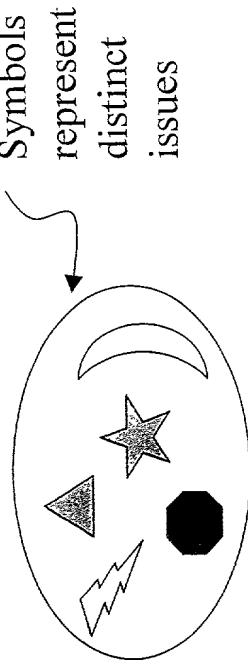

LSAT

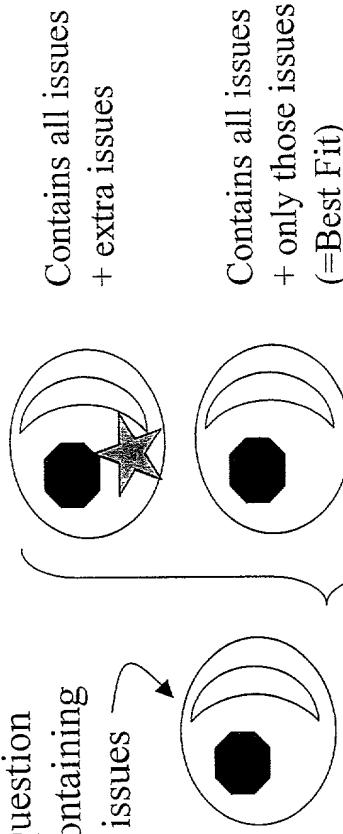

NOTE After the first diagnostic test (or using the students previous SAT results) the Binary Solution computer training program correlates each wrong answer with 5 questions from the database that share the same issues—resulting in a new customized drill set. The database also defines correct answers and provides detailed refutations of wrong answers. The student continues taking practice drills and using the database until ready for real LSAT

# The unique intellectual architecture of our Database is founded upon our method of Deconstruction

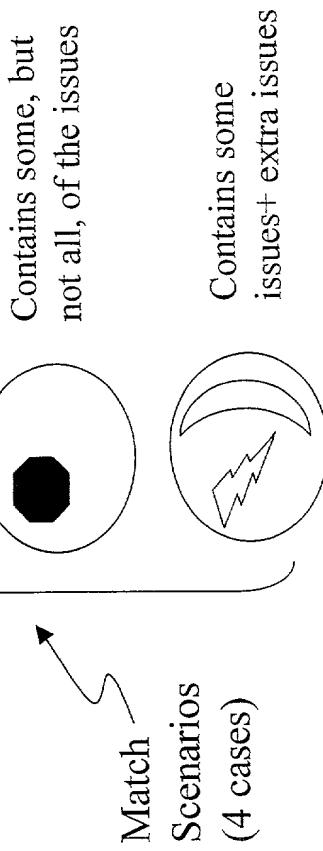

1. Subject matter is reduced to a finite set of issues

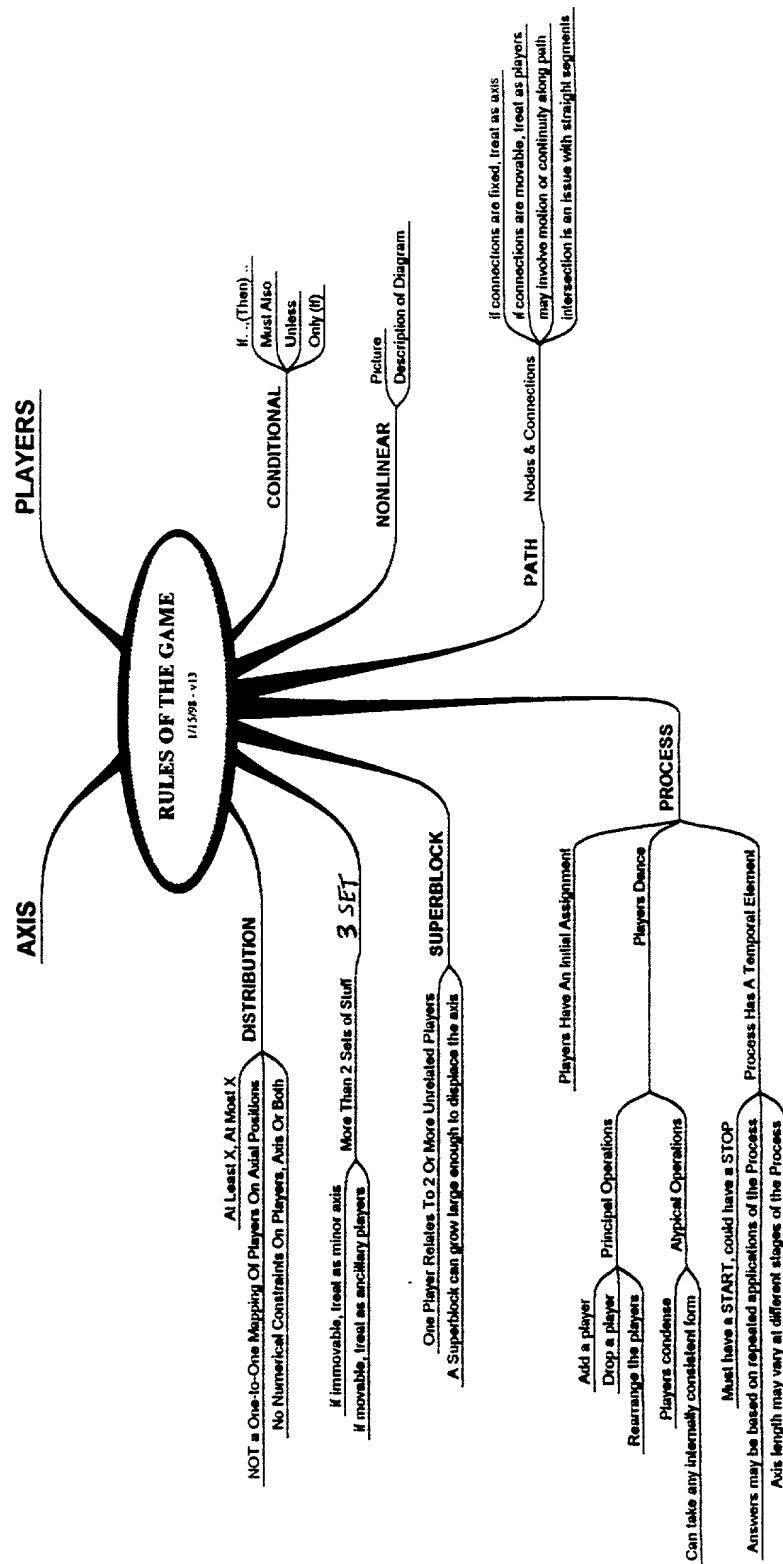

2. Each practice question contains a finite subset of those issues

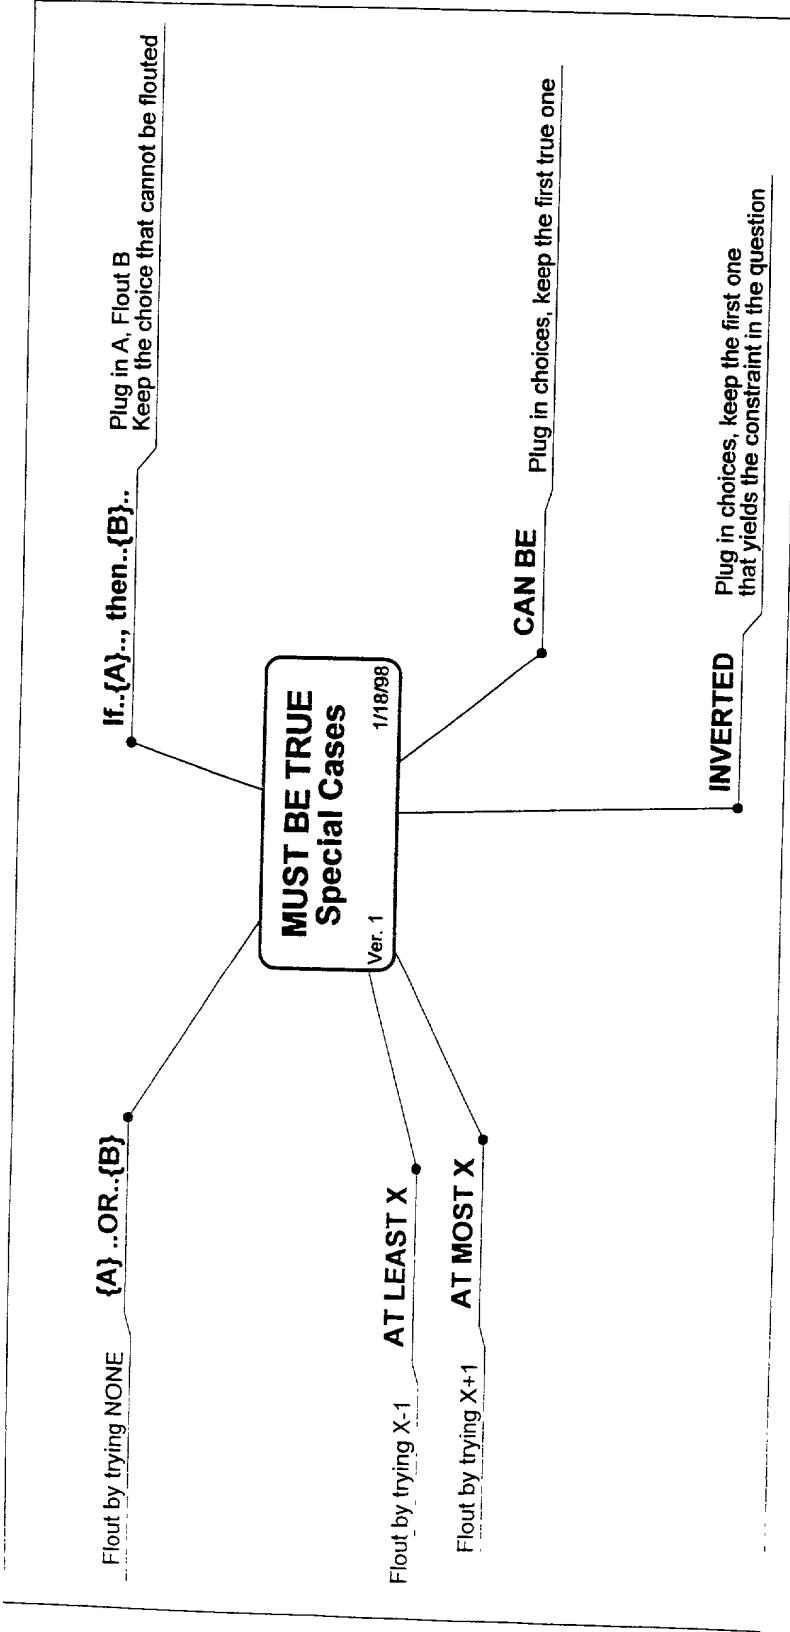

3. Matches can be made with other questions that contain some or all of the same issues

## GAMES ISSUES

## The DATABASE GENIES™

For each question the user answers incorrectly:

**Explanation Genie**  
explains why the user's response is incorrect & why the credited response is correct

**Drill Genie**  
searches for 5 similar questions so that the user can learn from his mistakes
